In an editorial, Greg Fegan et al. (82) discuss the potential of internet-based technologies for sharing public health data. In a second editorial, Nir Eyal & Samia A Hurst (83) suggest a fundamental change is needed in medical education to improve the retention of doctors in rural areas. In an interview, Chris Feudtner (90–91) explains how the diabetes epidemic is a product of modern technology.

**United States of America**

**Race against time**
The antibiotics pipeline is drying up while resistance to existing drugs is increasing. Theresa Braine (88–89) reports.

**China**

**Costs of childbirth in rural areas**
Qian Long et al. (144–152) investigate the financial burden on women giving birth in health facilities in rural areas.

**Sudan**

**Goitre in schoolchildren**
Abdel Monim MH Medani et al. (121–126) research iodine deficiency disorders in urban schoolchildren.

**Sub-Saharan Africa**

**Stagnation in family planning**
John G Cleland et al. (137–143) find that access to contraception is limited, particularly in west Africa.

**Viet Nam**

**Weight gain in pregnancy**
Erika Ota et al. (127–136) find low maternal weight gain puts babies at risk of low birthweight.

**Uganda**

**Tuning in to secure food**
Gary Humphreys (86–87) reports on a low-cost local solution to food insecurity.

**Kenya**

**Distance barrier to care**
Jennifer C Moïsi et al. (102–111) examine the link between travel time to hospital and child deaths.
